

## **OR PFH (22-16) MCKENZIE HIGHWAY BRIDGE REPLACEMENT DTFH70-08-C-00012**

Report Date: June 13, 2008

### **Status Report for the week ending June 13, 2008**

The contractor removed the old bridge on Monday and Tuesday of this week. The rest of the week involved removing the waste material from the demolished bridge and then completing the forms of the new bridge abutments (end support for the bridge slab) footings (See attached photograph #1). All of the work this week was located at the same site as the old bridge at Mile Post 66.69, east of Alder Springs snow gate.

A watchman has been posted at the White Branch snow gate (Mile Post 61.9) on the Old McKenzie Highway. He will advise the traveling public that there is no access, until further notice, east beyond that point for pedestrians, bicyclists and motorists.

Temporary construction signs have been placed west of the bridge project to reinforce the message on the changeable message signs that are located on Highway 126, east and west of the intersection at Highway 242/Highway 126.

### **Construction Activities for the week ending June 20, 2008**

The upcoming week activities will include the placement of concrete in the forms for abutments #1 and #2 footings at Mile Post 66.69. Simultaneously, concrete will be placed for the simulated stone masonry test wall. After the footings have had sufficient curing time abutment #1 and #2 will be formed.

### **Driving Conditions**

The west end of Highway 242 (Old McKenzie Highway) is closed at Mile Post 61.9, the White Branch snow gate. Temporary construction signs indicate the closure and the distance to the closure.
